Submitting as an individual.

I support the WCRC forming a Hokitika Rating District and meeting the required co-funding requirements of the proposal – YES

I agree with the proposed term of the loan – YES

I agree with the proposed governance structure – NO

I agree with the proposed boundary of the rating district – YES

Comments

As both someone who enjoys the town centre, riverside and beach amenities of downtown Hokitika, and a property owner who has benefitted from the seawall built along the beachfront adjacent to Beach Street and the town centre, I support the initiative for the WCRC to raise a co-pay from residents on a non-differentiated basis for further work on extending and strengthening the seawall and providing protection alongside the river. The effects of climate change mean many low lying properties and community facilities are at increasing risk from massive floods, and it makes sense to accept government help and raise a general rate amongst the community to help pay for this. I do think however, that the construction of the protection works needs both strong environmental and landscape input and it does not appear that the proposed governance structure provides this. Jose Watson

THE WEST COAST REGIONAL COUNCIL

Co-funding the Hokitika and Kaniere Resilience Project

16 September 2020

Submission form – what do you think?

The West Coast Regional Council is consulting on raising the co-funding required to secure Central Government funding for the Hokitika and Kaniere Resilience Project. The project involves the extension of the seawall to Richards Drive and the construction of a river flood protection scheme to provide far greater resilience and protection between Kaniere and Sunset Point from a 1:100 year flood event. This will involve changes to the current Rating Districts. We are seeking your feedback on this proposal. For more information visit: www.wcrc.govt.nz

Your feedback

I support the West Coast Regional Council forming a Hokitika Rating District and meeting the required cofunding requirements of the proposal.

Yes No

(I understand that by voting NO I am stating that I DO NOT want the project to proceed).

I agree with the proposed term of the loan

Yes No

I agree with the proposed governance structure

Yes

No

I agree with the proposed boundary of the Rating District

Yes

No

Comments: ' the proposed project to extend Hokitika sea-wall to Richards Drive', does this mean literally just extending the wall as it is in its emergency/temporary state, or does the funding incorporate the build out of the current temporary wall to align with the current wall protecting Hokitika CBD and then extend to Richards Drive.? Thanks.

Submissions must be received by Council no later than 5.00pm, Friday 9 October, 2020

Post a submission:

Kaniere
Hokitika 7811

Options	Yes or No
I support meeting the required co-funding requirements of the proposal <i>I understand that by voting NO I am stating that I DO NOT want the project to proceed</i>	Yes
I agree with the proposed term of the loan	
I agree with the proposed governance structure	
I agree with the proposed boundary of the Rating District	No

Please feel free to include any additional comments below:

- 1 There has not been any alternatives offered regarding the loan. Hard therefore to agree or disagree.
- 2 I would prefer to see an engineer on the governance structure. Current suggested structure is too political.
- 3 Hokitika serves a wider community from Fox to Stafford / Arahua. I suggest therefore that $\frac{2}{3}$ funding comes from the proposed boundary and that the balance is funded by the balance.

44116510890402 - 904 2/2

Hokitika Sea & River Wall proposals.

Personal Submission on the Hokitika and Kaniere Rating District Proposal

1. I would like to provide additional information to my response to the Council's request for agreement/disagreement to the current proposal.
2. There has been an erosive cycle on the Hokitika beach over the last year. In the context of historical events this has been minor and there is limited immediate threat to property.
3. The temporary works the Council has undertaken when properties were threatened have been appreciated.
4. Storm surges are the only immediate threat to Hokitika beachfront properties.
5. I consider the seawall built at Hokitika Town Centre (up to Stafford St) has degraded the natural character of the coastline and suppressed the natural process of driftwood accumulation, dune formation and growth of coastal vegetation. It offers limited protection from storm surges as evidenced by cyclone Fehi. In fact, it suppresses the natural processes that can offer protection. It also impedes safe access to the Beach.
6. I consider there are planning and engineering options available that would not destroy the amenity values of the beach and would enhance the natural processes that improve coastal resilience and mitigate storm surges.
7. It appears that any protection the seawall does offer, comes at a cost of exacerbated degradation wherever the wall ends.
8. Flooding in low lying parts of Hokitika (e.g. CBD and Gibson Quay) is due to stormwater, not the overtopping of levies. Council's proposals in this respect will do nothing to mitigate flooding. Improvements to Stormwater would. I offer no comment on the need for banks in the vicinity of Kaniere bridge.
9. I was unaware of the recent information day, but have been told by some who attended that there was limited information or detailed plans actually provided.
10. I would assume that any coastal protection measures would be fully researched and all options considered and put to the residents for feedback.
11. I consider that Central Government would prefer emergency funding allocated to be spent well, rather than quickly. I therefore hope that Council undertake a process that ensures:
 - a) The need for any work is made public through dissemination of evidence with the opportunity for review
 - b) Any work is subject to a design, review and consultation process before proceeding
12. I support the Hokitika Coastal Protection Alliance (HCPA)'s stance on requesting more engagement before any work occurs and working constructively with Council in getting the best coastal protection outcomes.
13. I consider there is a lack of information on the alignment and detail of proposed work.
14. I oppose any attempt to continue this design concept further north of Stafford St without full consideration of all other options available to me.

I believe that the rating district should be extended to include Hantay Road as far as Ravensdown then follow the base of the terrace as far as Kaniere dredge tailings then follow the southern edge of tailings to join up with Kaniere rating district. Also other areas that benefit from using Hokitika for work/recreation/and shopping should be considered for inclusion. Additional comments attached.

In conjunction with Westland District Council, the flooding at Kanire in the vicinity of the Motel should be addressed at this time. This flooding never occurred until the dredge pond behind the 1st rake of tailings started to be used as a dumping ground for all types of silt including vegetation which has blocked the natural watercourse that allowed access to Shenendobah creek hence to Hokitika river. This dumping started in Westland County Council days and was continued on by Westroads. I understand that it is still being carried out now. Although this was started before the resource management act came into force in 1991. Has a resource consent been obtained to continue this fill. An easy fix for this flooding problem would be to reopen the watercourse behind Westroads to Shenendobah creek and to enlarge the existing drains by the Motel and Butcher shop.

(yes but needs to increase)

It would be good to see the rating district include all those who are close to a case the downtown Hokitika area - eg Seaview, Bluegreen, the Airport etc on. - including Woodstock, Kimeru & Takutai on the south side of the river.

I am pleased that both councils are working together to protect the town from sea erosion.

It's important that we have a plan, that we draw a natural flowing line on the seashore, along Revell St and north of the town belt.

Construction works should be done properly, carried out to an engineers design, similar to the Beach St sea wall design.

1. Planning

- 1.1 Encourage the relocation of existing buildings and services landward of the Coastal Hazard Zone over the next 10 to 30 years before the onset of another erosion phase.
- 1.2 No new buildings should be permitted.
- 1.3 Rezone the land under extreme erosion risk to recognise the degree of risk and to promote land uses compatible with that risk.

2. Engineering

2.1 Hokitika River: Investigate the feasibility of training the Hokitika River mouth so that the river discharges permanently northwards and seawards. Training walls along the true left and right banks of the river should be spaced sufficiently to allow severe floods to pass unimpeded to the sea and not to cause serious outflanking of such works during floods. The training wall along the true left bank must not extend seaward or it will trap and deflect the net northerly drift of beach sediment causing erosion at Hokitika. The training wall along the true right bank should extend an adequate distance seaward to prevent the growth of a southerly spit across the mouth. The training works should be angled in such a way as to prevent the Hokitika River from flowing along the Hokitika foreshore.

2.2 Groynes: Reduce the amplitude of the short-term erosion-accretion cycle by constructing a groyne field between Hokitika Borough and the sewage settling ponds. To obtain optimum results the groyne field should be established between Weld Street and the north end of the sewage settling ponds as this stretch of foreshore is dominated by a net northerly longshore drift of the order of $240,000 \pm 10,000 \text{ m}^3/\text{year}$. No groynes should be constructed between Weld Street and the Hokitika River mouth as this area is dominated by onshore-offshore sediment transport and is a feeder zone for the net northerly drift.

Construct the first groyne at Richards Drive commencing with the lower foreshore section followed by the upper foreshore section. Construct to dimensions and standards set by Westland Catchment Board allowing for increases in both height and length of the groyne as appropriate, depending on the rate of adjustment of the beach updrift and downdrift of the structure.

Construct the second groyne at the north end of the sewage settling ponds in accordance with dimensions and standards set by Westland Catchment Board, allowing for increases in both height and length as appropriate. Commence construction about one month after the first stage of the Richards Drive groyne.

Increase the initial height of the Richards Drive groyne along its entire length by one metre. The timing of this stage of construction is to be governed by the updrift and downdrift beach adjacent to the groyne having reached equilibrium after the first stage of construction. Commence construction one to two months after the first stage depending on performance.

Depending on the performance of the 2 m-high Richards Drive groyne, either increase the height by a further metre along its entire length or construct a third groyne between Hampden and Tudor Streets. The choice of site for the third groyne is to be determined Westland Catchment Board and should be governed by where the accretion wedge updrift (south) of the Richards Drive groyne pinches out. It may be possible to proceed with this stage three to four months after construction of the Richards Drive groyne depending on its performance.

Depending on the length of the accretion wedges protecting the foredune, allow for construction of either further groynes as required or the vertical and horizontal extension of the existing groynes during late 1987.

During construction of all stages replenish the upper foreshore updrift and downdrift of the groynes with gravels compatible with those on the beach. The volume and rate of replenishment should be in proportion to the rate of loss of beach sediment to counteract the effects of the loss.

3. Monitoring

3.1 Westland Catchment Board should continue to monitor the beach and foredune between the Hokitika River mouth and the sewage settling ponds at approximately monthly intervals. The monitoring programme should continue until the erosion phase has passed and accretion has become predominant.

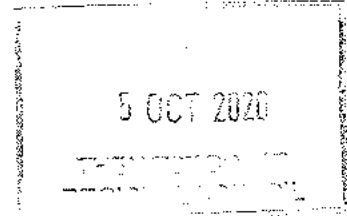

3.2 During monthly surveys the direction of offset of the Hokitika River discharge channel should be recorded.

3.3 Prior to construction of the groyne field Westland Catchment Board should carry out a detailed levelling survey of the beach updrift and downdrift of the proposed sites for each groyne. A contour plan of the beach should be produced from the levels and a resurvey of the beach should be made every two weeks for the first two months following construction. After two months the resurvey interval should be increased as appropriate to approximately monthly intervals in accord with 3.1 above. During the monitoring survey provision should be made to resurvey the beach after significant onshore storms.

This project should be picked by the government. They can give billions of dollars to everyone else. They should be able to spare a few million to fund this project.

I agree with the proposed term of the loan	
I agree with the proposed governance structure	
I agree with the proposed boundary of the Rating District	No

Please feel free to include any additional comments below:

- 1 There has not been any alternatives offered regarding the loan. Hard therefore to agree or disagree.
- 2 I would prefer to see an engineer on the governance structure. Current suggested structure is too political.
- 3 Hokitika serves a wider community from Fox to Stafford / Arahua. I suggest therefore that $\frac{2}{3}$ funding comes from the proposed boundary and that the balance is funded by the balance.

Please feel free to include any additional comments below:

I cannot understand why we are not dredging or removing gravel from the river bed and mouth of the river. We have lived next to the river for the last 25 years and the build up over the last few years in the river bed has been substantial. Why not let contractors remove the gravel to be used elsewhere. This would surely help reduce the need for coastal protection as well.

Co-funding the Hokitika and Kaniere Resilience Project

Personal Submission from Jo Parsons

174 Revell St

Hokitika Sea & River Wall proposals.

1. I would like to provide additional information to my response to the Council's request for agreement/disagreement to the current proposal.
2. There has been an erosive cycle on the Hokitika beach over the last year. In the context of historical events this has been minor and there is limited immediate threat to property.
3. The temporary works the Council has undertaken when properties were threatened have been appreciated.
4. Storm surges are the only immediate threat to Hokitika beachfront properties.
5. I consider the seawall built at Hokitika Town Centre (up to Stafford St) has degraded the natural character of the coastline and suppressed the natural process of driftwood accumulation, dune formation and growth of coastal vegetation. It offers limited protection from storm surges as evidenced by cyclone Fehi. In fact, it suppresses the natural processes that can offer protection. It also impedes safe access to the Beach.
6. I consider there are planning and engineering options available that would not destroy the amenity values of the beach and would enhance the natural processes that improve coastal resilience and mitigate storm surges.
7. It appears that any protection the seawall does offer, comes at a cost of exacerbated degradation wherever the wall ends.
8. Flooding in low lying parts of Hokitika (e.g. CBD and Gibson Quay) is due to stormwater, not the overtopping of levies. Council's proposals in this respect will do nothing to mitigate flooding. Improvements to Stormwater would. I offer no comment on the need for banks in the vicinity of Kaniere bridge.
9. I consider there is a lack of information on the need, alignment and / or detail of proposed work in the current submission form. This appears to allow Council officers to proceed without the need for peer review or consideration of effects on amenity values and coastal /river processes.
10. I would assume that any coastal protection measures would be fully researched and all options considered and put to the residents for feedback.

11. I was unable to attend the recent information days, but have been told by some who attended that there was limited information or plans actually provided.
12. I consider that Central Government would prefer emergency funding allocated to be spent well, rather than quickly. We therefore hope that Council undertake a process that ensures:
 - a) The need for any work is made public through dissemination of evidence with the opportunity for review
 - b) Any work is subject to a design, review and consultation process before proceeding
13. I support the Hokitika Coastal Protection Alliance (HCPA)'s stance on requesting more engagement before any work occurs and working constructively with Council in getting the best coastal protection outcomes.
14. I consider there is a lack of information on the alignment and detail of proposed work.
15. I oppose any attempt to continue this design concept further north of Stafford St without full consideration of all other options available to us.
16. If Council does not agree with my view that the submission process is invalid, then I wish to register my opposition to the four 'options' stated on the survey form, which oversimplify the situation and the wider issues to be addressed.

Thanks for your consideration.

A handwritten signature in black ink, consisting of a stylized 'J' and 'P' followed by a long horizontal stroke that tapers to the right.

Jo Parsons

Hokitika Sea & River Wall proposals.

Personal Submission on the Hokitika and Kaniere Rating District Proposal

From Alexander Ritchie and Tiff Stewart

210 Revell Street, Hokitika 7810.

Phone 03 280 9944

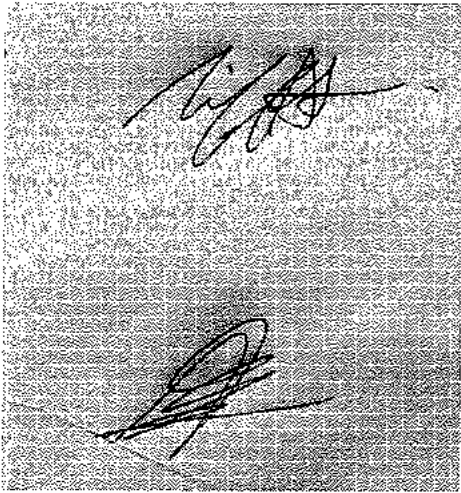

9/10/2020

1. We would like to provide additional information to our response to the Council's request for agreement/disagreement to the current proposal.
2. There has been an erosive cycle on the Hokitika beach over the last year. In the context of historical events this has been minor and there is limited immediate threat to property.
3. The temporary works the Council has undertaken when properties were threatened have been appreciated.

Without going in detail, it is my opinion, that the New Zealand NATIONAL govt ^{should} protect all its citizens. It is a bad idea if people have to pay for their own protection; why would you need any governance than?
I pay more than enough for the seawall. Thank you.

Why send out all this paper work at a cost to Reg Rate payers, when you know it's going to happen anyway.

You need to keep watching the river mouth & sea as it's changing after every flood and will keep changing it Nature and you won't stop it know matter how much money you throw at it. Think of all us low income people who only get the same amount each fortnight no matter what

Your Survey is out
of Kitter Somewhere
Hi Council!

talk about confusion & misleading stuff arising with the house bill for regional rates - I've been away. We've got about 5 minutes to make some seemingly major decisions. I need more time.

Building walls seem to threaten natural beach processes. It is cyclic 22 yrs ago my husband & I purchased this property & the sea was much closer to the house than it is now. The council was interested in doing a

Dring give sea down appear/disappear eh for yrs. We bought the house to look at the sea. I'd hate a wall to block that view, no point

2/12 living here it that happens.

As it is give had a neighbor

who has systemically tried a

successful a block) some of my

view (Hubbard decreased 10 yrs now).

What has he done? removed all natural

land due vegetation, planted idiot

things a now 'cos everything has

collapsed in to the sea his lamenting

the fact that "it's just sand & grass

subject" (Waller's speak to me at all

for about 9 yrs).

9m not say) make want all

It could do, the sea

will do what it likes.

But if had to be sympathetic's

I look at either side of

his footage & realize & know that

by leave what was there (dinner)

3/ has proven to be the most

effective thing to stop erosion.

Last time council gave us a

chance to vote, I wrote a way

disgusted to read parts of my letter

there out of context & misquoted/

quoted in the newspaper, & ridiculed.

My surveyor Brother backed what

I said, I was accurate in many

ways.

Someone what's been done at

to me mark, C.B.D. etc has

had a bad effect on this

end of the beach. Say what

you like. I don't know what to say

parting ^{any} believe a lot of the council

now got a clue what to do

4/ either. Be honest, talk to us
more - visit.

You send up drones, you talk to
engineers, what have you learnt??
I'm not stupid, I want to know.
There's no time now, according to
your time frame.

What is the rush? The
bank is quite settled at the mo'.

The government throws you a
money carrot; think a bit more,
there's time.

It isn't the money issue
particularly that bothers me either.
(Obviously I don't want to pay
more than necessary). I've paid
plenty over the years (district +
regional).

5/ One of my main concerns now is that because you've started a wall at the tower end, it's eroding at this end which it wasn't before & now we might be stuck with having to have a completed wall to stop erosion, but what after that?

Do you build a wall right to Greyhound?

I see D. Havill going on about the dairy co. in the paper this morning - well, the Chinese government has bought that basically so let them grow that out. They seem to have plenty of money, monitor their ^{actions} But you better

Basically live & see "Systems" need to be left in natural as possible. From what I can observe.

6/11/99 One in sea-level use.

-gt is quite obvious that what

Councillor Stuart Challenger has said

in the part, basically the whole

town will need to up (hills etc)

inland more and up (hills etc)

No wall a more mortal build

will control ^{the greatness of} "Man in very

small next to nature (Design quote)

for the meanwhile what are we

supposed to do? I don't know

any more than anyone - I

can't seem to have a peaceful

life in a simple cottage by the

sea, I might just consider

many elsewhere. I'm absolutely

sick of it.

We've got an horrendous general

election & referendum. (coming up + 9th
possibly energy or that. Sincerely Stuart Challenger)

In the current situation, eg COVID 19's effect on the globe, I am not at all keen on more rates increases. Neither am I for more 'advisory committees' being paid top dollar to 'advise'. Ask the ratepayers first. Additional debt in these fiscally insecure times seems foolish.

This has to be among the stupidest attempts at Bureaucrats just saying their existence. Within the limits of my property and further there has been no erosion for over 50 years. If a flood should Top This Terrace Hokitika is finished and you cannot build a wall high enough to stop it. This Northern channel only carries a miniscule of flow to what it used to. The floods in recent years only being minor compared to the past

I agree with the proposed term of the loan	No
I agree with the proposed governance structure	No
I agree with the proposed boundary of the Rating District	No

Please feel free to include any additional comments below:

I think the proposed work is a waste of money. You cannot control the actions of sea or river. The money would be better spent on migrating the town away from the affected area.

Please feel free to include any additional comments below:

- 1/ The project needs to also include the south bank of the Hokitika River from the Kaniere bridge to the Hokitika bridge.
- 2/ The proposed Rating District should also include the Pine Tree Road houses and Racecourse Terrace subdivision. This to be consistent with the proposal to include Bonar Drive / Whitcombe Terrace and Alpine View "terrace land" areas.
- 3/ Much more work details need to be provided to allow any one to make a better decision.

Please feel free to include any additional comments below:

our property is owned jointly + our rates invoice is in joint names so why is this survey only in an individual name?

We have lived on the banks of the Hokitika River for 46 years + have yet to see the river breach the bank on the north side and have seen the Westland District Council allow building on sections with the back boundary being pushed beyond the survey pegs into the true riverbed.

These sections were abandoned land + sold as "buyer beware" by the WRC. I consider the proposal a waste of good money and who is to say the suggested stopbank will protect in the predicted 100 year flood.

I have lived in Hokitika for 70yrs, Bar from Back up in Town Drains I have never seen The Hokitika River flow over The wall or cross The Raitline on Gibson G. This is a dream of some seat warmer in Wellington or Greymouth to keep a job. When passing R. council office at South Beach the increase in cars tells me that over Staffing is A joke.
