Feedlots and other stockholding areas

Essential Freshwater Regulations

New rules around feedlots came into effect on 3 September 2020. On **1 July 2021** new rules will come into effect for stockholding areas other than feedlots. These new rules are part of the Resource Management (National Environmental Standards for Freshwater) Regulations 2020 (NES-F).

If you use feedlots, or other stockholding areas, it is important to consider the new rules and whether you will need to apply for a resource consent.

NOTE: For the purpose of the NES-F, standoff pads and wintering areas are considered stock holding areas.

Key points

- On 3 September 2020 the NES-F rules for feedlots came into force. All new feedlots must immediately comply with the NES-F.
- From **1 July 2021**, the NES-F rules for stock-holding areas (other than feedlots) come into force. If you cannot comply with the NES-F rules, you have until 31 December 2021 to apply for a consent under existing land use.
- During your annual inspection for dairy effluent discharge consents, the West Coast Regional Council (the 'Council') Compliance Officer will also check if you have a feedlot or stockholding area, and if so, whether you need to apply for a resource consent.
- If you require a resource consent for your stockholding area please speak to the Council about your options.
- Follow the flow chart on page 3 to see whether you have a stockholding area and whether you need a resource consent. If so, you can start the process immediately you do not have to wait until your existing use rights expire or the Council advises you to get a consent.

Definitions

A **feedlot** means a stockholding area where cattle:

- (a) are kept for at least 80 days in any 6-month period; and
- (b) are fed exclusively by hand or machine.

A sacrifice paddock means an area on which:

- (a) cattle are repeatedly, but temporarily, contained (typically during extended periods of wet weather); and
- (b) the resulting damage caused to the soil by pugging is so severe as to require resowing with pasture species.

A stockholding area:

- (a) means an area for holding cattle at a density that means pasture or other vegetative ground cover cannot be maintained (for example feed pads, winter pads, standoff pads, and loafing pads); but
- (b) does not include an area used for pastoral purposes that is in the nature of a stockyard, milking shed, wintering barn, or sacrifice paddock.

See the flow chart over on page 3 to see if you have a feedlot or stockholding area and whether you need a resource consent

Feedlots

Permitted activities

You must meet all of the following conditions for a feedlot to be a permitted activity. If you are unable to meet all of these a resource consent will be required.

Conditions

The conditions are that 90% or more of the cattle are held in the feedlot must:

- (a) be no more than 4 months old; or
- (b) weigh no more than 120kg.

Stockholding areas other than feedlots

There are two sets of standards and conditions for stockholding areas. One is for young stock and the other is for older stock.

You must meet all of the standards and conditions for your relevant section if your stockholding area is to be a permitted activity. If you are unable to meet all of these, a resource consent will be required.

Permitted activities: Stockholding areas for small and voung cattle

The use of land on a farm for holding cattle in a stockholding area (other than a feedlot) is a permitted activity if it complies with the conditions below.

Conditions

The conditions are that 90% or more of the cattle held in the stockholding area must:

- (a) be no more than 4 months old; or
- (b) weigh no more than 120kg.

Permitted activities: Stockholding areas for larger and older cattle

The use of land on a farm for holding cattle in a stockholding area (other than a feedlot) and the discharge of contaminants from the stockholding areas is a permitted activity if it:

- (a) does not comply with the conditions for stockholding areas for small and young cattle to be a permitted activity; but
- (b) complies with the conditions (below) for stockholding areas for larger and older cattle to be a permitted activity.

Conditions

The conditions are that:

- (a) the base area of the stockholding area must be sealed to a minimum permeability standard of 10⁻⁹m/s; and
- (b) effluent expelled in the stockholding area must be collected, stored and disposed of in accordance with a rule in a regional or district plan, or a resource consent; and
- (c) the stockholding area must be at least 50m away from any water body, any water abstraction bore, any drain, and the coastal marine area.

Note – the NES-F also allows for stockholding areas to be managed in accordance with a certified freshwater farm plan - however the West Coast does not currently have any of these.

Sacrifice paddocks

There are no new rules that specifically cover sacrifice paddocks and they are excluded from the definition of a stockholding area. However, it is not okay to pollute

waterways even if there is no rule covering your activity.

Should your sacrifice paddock cause effluent, sediment or other contaminants to enter a waterbody you may still be subject to enforcement action under the Resource Management Act.

Existing use rights

Existing use rights under section 20A of the Resource Management Act apply only where the feedlot or stockholding areas was already existing (as at 3 September 2020) was operating legally and where the effects will be the same or similar in character, intensity and scale. But only for a limited time.

You have until 31 December 2021 to lodge an application for consent for a stockholding area (if you could not comply with all the permitted activity conditions and a consent is required). You can continue the activity until a decision is made and any appeals are resolved.

Where your stockholding area was not an existing activity, or the effects will increase in character, intensity or scale, make sure you comply with all the permitted activity conditions or obtain a consent before undertaking the activity.

How do I apply for a resource consent?

If you think you may need to apply for a resource consent for your feedlot or other stockholding area, go to www.wcrc.govt.nz and follow the Essential Freshwater links.

Contact us

If you have any questions on intensive winter grazing, or any other aspect of the NES-F please email info@wcrc.govt.nz or call our Consents and Compliance team on 0508 800 118. Our website at www.wcrc.govt.nz will also be regularly updated with guidance.

Do the NES-F stockholding or feedlot rules apply to me? Do I need a resource consent?

Are cattle held at a density that means pasture or other vegetative ground cover cannot be maintained e.g. feed pads, winter pads, stand-off pads and loafing pads? AND Is the area not used for pastoral purposes, e.g. stockyard, milking shed, wintering barn or sacrifice paddock?

> YES to both

Is it a feedlot?

- Are cattle kept for at least 80 days in any sixmonth period? AND
- Are cattle exclusively fed by hand or machine?

NO to either

YFS to both

Feedlot regulations apply

Are 90% or more of the cattle held in the stockholding area:

- Younger than 4 months? AND
- Weigh less than 120kg?

Resource consent required

- A resource consent is required immediately for new feedlots or by 31 March for existing lawful feedlots (as at September 2020)
- Please contact the Council to discuss your situation and options.

NO to either

The NES-F rules do not apply

Stockholding (other than feedlot) regulations

Are 90% or more of the cattle held in the stockholding area:

- Younger than 4 months? AND
- Weigh less than 120kg?

Does the stockholding area:

- Have a base area sealed to a minimum permeability standard of 10-9m/s? AND
- Collect, store and dispose of the effluent in accordance with the Regional Land and Water Plan for the West Coast? AND
- Have a location 50m from any water body, water abstraction bore or drain, and the coastal marine area.

Resource consent required

- A resource consent is required immediately for new stockholding areas or by 31 December 2021 for existing lawful stockholding areas (as at September 2020)
- Please contact the Council to discuss your situation and options.
