

Westport Earthquakes

Jan 29th – February 28th 1991

Printout from GNS Quakesearch Database showing 'quake epicentres and size
for one month post the initial Jan 29th earthquake

1991

BULLER EARTHQUAKES

January 29 1991: 1.59 am	(February 15 1991: 11.48pm)
7.01 am	
Magnitude:	6 (5.8)
	6.1
Epicentres:	41° 55' S 171° 44' E 41° 56' S 171° 50' E (42° S 171° 30' E)
Depth of earthquakes:	8 km 14 km 12 km
No injuries	
Areas affected:	Westport, Lower Buller Gorge, Waimangaroa, Cape Foulwind, Granity, Ngakawau, Hector, Reefton, Greymouth and Inangahua.

seems that the 80 metre long slip occurred in the same area affected by the 1968 Inangahua earthquake. A noticeable feature of roading damage in the region was a one metre subsidence in the Virgin Flat road near Cape Foulwind.

It is possible, that had the quakes been centred further south, major slips would have occurred in the rain-sodden Grey District. The Grey District Council's early estimate on the cost to repair roading damage (the combination of heavy rain and earthquake), was about \$50,000.

In the Buller District, toppled chimneys and items falling from shelves were the main reason for claims to the Earthquake & War Damage Commission, with chimneys accounting for more than half of the initial claims. Chimney damage in the district is more extensive than originally thought, with 40 out of the first 50 chimneys in Westport alone shown to be unsafe after being smoke

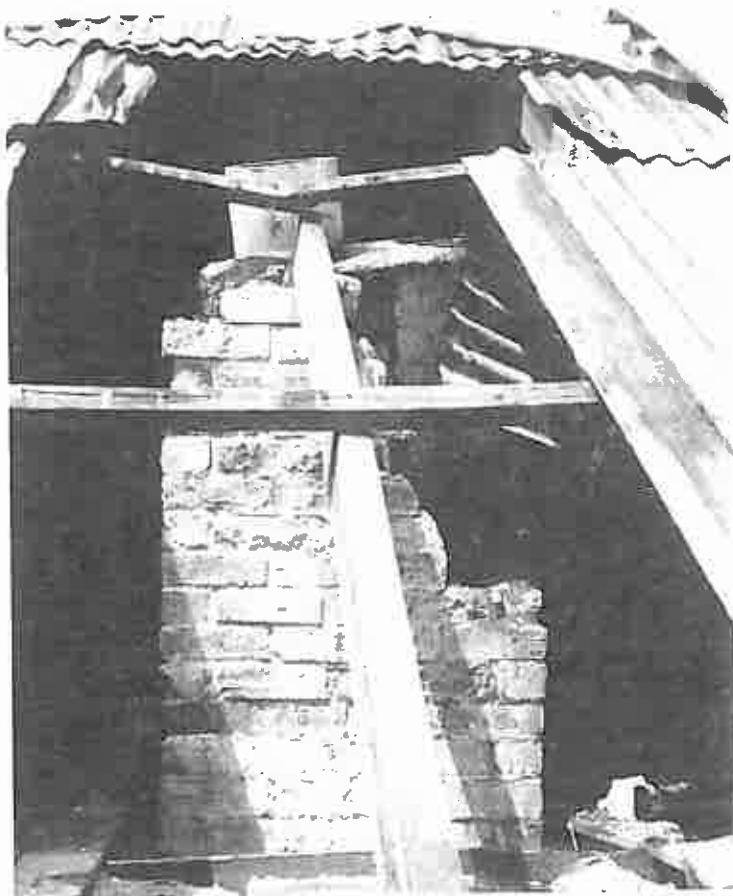

If, in the future, you are involved in a civil defence exercise for which the main scenario is a flood, don't be surprised if the scenario suddenly introduces an earthquake (or two) 4 hours after the peak of the flood. This is what happened for real on the morning of January 29.

Two earthquakes (magnitude 6 and 6.1 and relatively shallow at 8km and 14 km depth), rocked the Buller District at 1.59am and 7.01am. They were felt in Christchurch, parts of Wellington and as far north as Wanganui.

These earthquakes, located about 120km north of the flooding centre, caused a number of slips on main West Coast routes. State Highway 6 near Tiroroa, in the lower Buller Gorge, was blocked for approximately 12 hours by a 80 metre long slip. State Highway 6 was also blocked by slips south of Westport. It

DSIR geologists, Russ van Dissen and Gordon Saul, examine the Virgin Flats Road subsidence. (Photo: Courtesy, The News, Westport)

Chimney damage in Reefton. (Photo John Lovell) ...

tested. (Initial reports indicated more than 300 chimneys were damaged.) The Buller District Council is therefore introducing a very rigid inspection programme for all chimneys which will include both a structural and smoke test. And because the Buller District Council doesn't want a repeat of the 1968 emergency (Inangahua earthquake), when many repairs were not inspected or supervised, all chimney repairs will have to be done under full planning regulations.

Rural damage is also more extensive than originally thought, with productive farm land being affected by slips. With winter rainfall still to come, this land could become vulnerable to further slipping.

Lack of restraint

Two features of most New Zealand earthquakes is the mess left in shops when the shaking is over and the speed in which Kiwis grab the phone to either compare notes about the shaking or check on relatives and friends. Last year's earthquake in Dannevirke illustrated what happens in both situations and the Westport quakes reinforce these.

Unrestrained items in supermarkets and shops in Westport and as far away as Greymouth, ended up on the floor, resulting in a small cost to businesses in clean-

up time and stock loss. Shop owners and business managers would do well to look at ways in which they can protect their assets from earthquake damage.

For much of the day following the January 29 earthquakes, the telephone exchange at Westport tried to cope with the influx of calls from around New Zealand. It couldn't and people were left wondering why they couldn't get through. It is far better in emergencies such as this to wait for relatives or friends in the affected area to make contact instead of overloading the telephone system. If the news media report that no injuries or deaths have occurred, it is worth listening to them. The news media in New Zealand has a responsible attitude towards reporting emergencies (in spite of the increased competition) and still take time to confirm facts.

Telephones and emergencies

If you live away from the area affected by an emergency, sit tight and wait — resist the urge to use the telephone to find out what has happened. Listen to the radio instead.

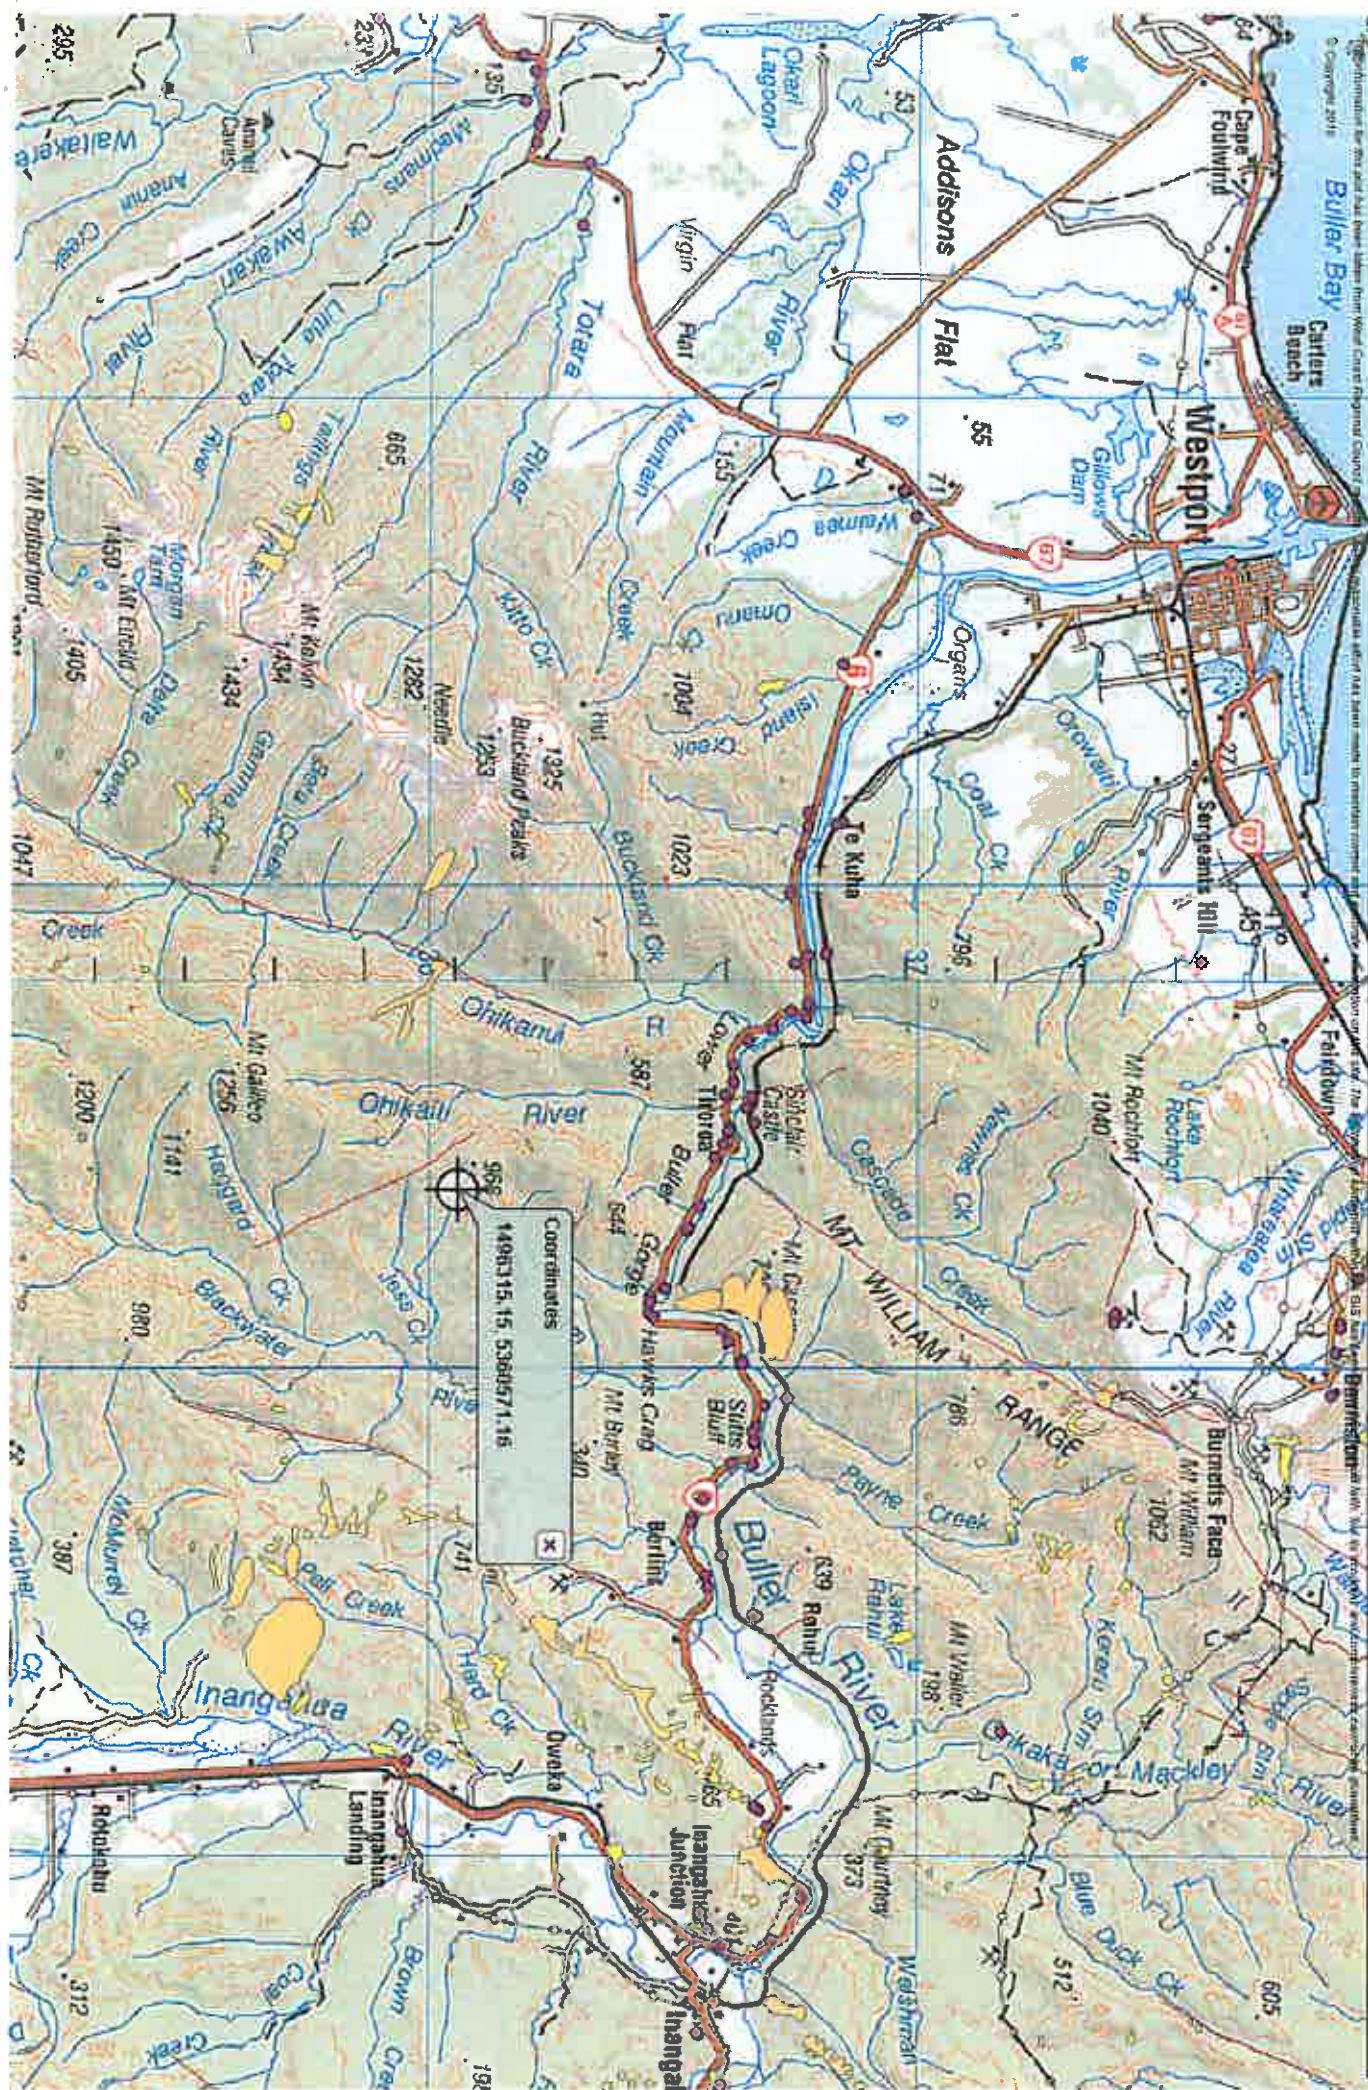

If you are in the affected area, use the telephone only to summon help in a life-threatening situation.

Damage costs to this stock at Howard's Camera and Gifts in Westport was about \$1,000. (Photo courtesy of The News, Westport.)

Epicentre Area 1991 Westport Earthquakes

Serie 1 : 1200000000000498

Quake Damage Is Assessed

C.S. 25/11/1981

West Coast communities were today assessing the damage caused by two strong earthquakes this morning.

The quakes, both centred around Westport, brought memories of the disastrous 1968 Inangahua earthquake flooding back. They measured six or more on the Richter Scale and were described by Department of Scientific and Industrial Research staff in Wellington as "quite strong by New Zealand standards."

The first was centred almost directly under the town of Westport at 1.59am. It measured six on the scale and was 12km deep.

AFTERSHOCKS

Regular aftershocks continued until another large quake, measuring 6.1 on the Richter scale at 7am with further minor jolts throughout the morning.

The epicentre of the first quake was almost directly under Westport and the second was 15 kilometres

south-east of the town at a depth of 12 kilometres.

The earthquakes were felt over the West Coast, the top part of the South Island and as far north as Wanganui.

Power was cut in Westport for three-quarters of an hour from 3am after three 11,000 kv lines snapped near the corner of Peel and Romilly Sts.

A major slip at Tiroa, 26km south-east of Westport, closed the Lower Buller Gorge from 2am. Works Consultancy staff were on the job when the second quake came but no further damage was caused.

The 80 metre-long slip is in the same area badly affected by the 1968 earthquake. The road was expected to be open by midday.

A number of smaller slips were reported in the Lower Buller Gorge.

CRACKS NOTICED

Cracks appeared in parts of State highway 6 in the Buller Gorge according to Works Consultancy Services which is today assessing

damage to roading.

Houses in the northern country areas of Waimangaroa, Granity, Ngakawau and Hector appeared to be worst affected with one jumping off its foundations and another near new house receiving structural damage.

Area civil defence controller, Mr Chris Coll, said no-one was reported injured in Buller, but a number of chimneys were broken, pipes burst and one shop, Hallensteins, had all its plate glass windows broken or cracked.

Westport's biggest gift shop, Howard Camera's and Gifts, reported \$1000 worth of stock lost. Owner, Mr Gary Howard, said if the earthquake had been as strong as the 1968 one stock losses would have been ten times as worse.

A lot of stock fell off supermarket shelves, most likely during the first quake, with goods in glass jars and burst paint tins causing the most problems.

(Turn to Page 4)

FROM PAGE ONE.—G.S. 29/1/1991 (2)

Quakes Hit Coast

Supervalue and Keystores in Derby Street opened at the usual time while New World was closed until 9.30 and Keystores in Palmerston Street until 10am.

Buller Electric Power Board staff checked for damage this morning.

Engineer Mr Seng Tham said four consumers lost power when their overhead supply line came away from buildings.

The Westport Kindergarten resumed today although only 18 of the 40 children on the role attended. They were given earthquake drills and talks.

The Westport Playcentre postponed today's opening and the Waimangaroa School was closed today because the water and power were off. Most pupils would have been staying home anyway, said a staff member.

LESS DESTRUCTIVE

The quakes were less destructive in the Greymouth area but still strong enough to shake goods from shop shelves, break ornaments and topple chimneys in the area.

Greymouth's two supermarkets reported around \$200 worth of damage all up.

Manager of New World, Mr John Boyes managed to fill a large banana carton with damaged stock, including smashed sauce bottles and dented tins.

Staff at Supervalue spent almost 45 minutes cleaning up around \$150 worth of damage.

Manager, Mr Errol Boucher, believes the first quake shuffled stock to the edge of the shelves, and the second bought it down.

Both men said they were lucky the jolts didn't cause more damage.

Coalcorp workers at the

Stockton opencast mine reported for work but were allowed to go home to be with their families. Denniston miners did not venture underground today but worked on the surface until the mine is checked out.

Stockton mine manager, Mr Stephen Bell, said the second quake occurred just after the miners reported for work.

NO PROBLEMS

"Some of the wives rang up worried and they decided to head home."

There were no problems with the mine though.

"But it's a fair drive from Westport and if there were any real problems I think they would have preferred to be at home."

It was work as usual, however, at the Strongman underground mine at Rāpāhoe. Mine manager, Mr Barry Smith, said two examining deputies were underground when the second quake struck and although it was felt underground there were no problems.

"It's a risk we always take. We can't predict earthquakes. If we were frightened of them we would never go underground."

Inquiries from anxious relatives and friends in other parts of New Zealand caused congestion to telephone toll lines to Westport. But the quake itself did not cause any damage to the telephone system according to Telecom South.

The Buller District Council was today assessing damage caused by the quake.

DAMAGED CHIMNEYS

Buller District manager, Mr Darryl Griffin, said he had received reports of damaged chimneys in Waimangaroa, Reefton and

Westport and some subsidence of the road to the town water supply. But the supply itself did not appear to have been affected by the quakes.

He said it was too early at this stage to assess the cost of the damage.

The Grey District Council had received no reports of any damage but was today checking that water mains were intact.

West Coast Area Health Board general manager, Mr Peter Kerridge, reported only minor damage to the region's four main hospital bases.

"In Westport a seal on a water storage tank ruptured, but that was easily fixed soon after the second quake, while the fire alarms went off in both shakes, causing minor disruption.

"At Reefton, the 80 foot concrete boiler chimney appears to have suffered some damage to its top. We've roped the area off and have arranged for a helicopter to check it over.

"A copper water tank also split, but that can be repaired.

"There was also damage to a water tank at Hokitika and a 14-inch stormwater drain under a road ruptured, but whether that was because of the quake or the rain is not certain at this stage.

"There were no problems whatsoever at Greymouth, so we came out of it extremely well," Mr Kerridge said.

The epicentre was 32 kilometres south-east of the magnitude seven Inangahua earthquake in 1968.

In 1962 there was a series of earthquakes near Westport with the largest having a magnitude of 5.9.

Westport suffered badly during the 1929 Murchison (or Buller) earthquake which measured 7.6 on the Richter scale.

Inangahua College Closed

Inangahua College at Reefton was closed to pupils today because of surface water in the area and fears of another earthquake.

All other secondary

schools in the region, due to start back today, were on schedule, although a spokesperson at Westland High expected some bus pupils might not be able to get through because of flooding and road blockages caused by heavy rain in the Hokitika and South Westland area.

There has been some confusion over starting dates with primary schools given more leeway than their secondary counterparts, which must open on the fifth Tuesday of the new year.

As far as can be ascertained, in Greymouth,

Blaketown primary school was the only one open this week.

Principal, Mr John Bate-man, said he had hoped students could get in some extra swimming, and it would also mean an earlier start to the Christmas holidays.

Other Greymouth schools, including the Intermediate, are expected to open next Monday.

Principal of Greymouth High School, Mr Des Hinch, said despite different start dates, mid-term holidays would be adjusted to fit in with most primary schools.

'Quakes Revive Memories

Nelson

PA

Mariri Valley farmer Sylvia Badcock relived the devastating 1929 Murchison and 1968 Inangahua earthquakes during the double shock early yesterday.

"It immediately brought back all the old feelings of the 1929 one and the Inangahua one, which was rugged enough too."

Yesterday's tremors about 2am and 7am were "nowhere as bad" but still finished off Miss Badcock's "rather woebegone tank stand."

She said the 2am shake was the worst of yesterday's earthquakes.

"That got me out of bed making tea and twitching. I read then, waiting for the aftershocks which never came. I finally got to sleep at 5.30am, to be rudely awakened at 7am by the second one."

AWOL Cats!

3/1/91 GES

A number of cats in Buller have gone AWOL following Tuesday's big earthquakes.

Local veterinarian, Ms Stephanie Herron, said cats seemed more nervous than dogs about the quakes and some had gone into hiding.

"They're probably going to be a bit scary for the next couple of days," she said. "Some have been

hiding under houses and things like that since the earthquake and are reluctant to come out. But they should regain their normal confidence."

Ms Herron said cat owners should let their pets do their own thing.

She said dogs were often closer to their owners. If the owners could reassure them, they usually calmed down quickly.

GES 31/1/91

"The Day The Roof Caved In" On A Salesman!

A salesman staying in Revington's Hotel at Greymouth had a lucky escape from at least a serious drenching when about 1200 gallons of water brought the ceiling down on his bed after Tuesday's 7am earthquake.

Hotel proprietor, Mr Ces Leopold, said today the man just had time to move some personal possessions from the room before the "roof caved in."

"He had noticed a bit of seepage through the ceiling and reported it to me. When I looked it was a bit more than seepage and I told him to remove his possessions, but the ceiling collapsed before he could get everything out," Mr Leopold said.

"A torrent of water, plus some sheets of roofing material, dropped straight into the room and the water gushed out into and along the hallway."

The cause of the problem was a 1200 gallon holding tank which had a pipe

shaken from it in the earthquake.

The water flowed from the tank and found its lowest point above the room, until, finally, its weight forced the pinex sheets from the ceiling joints.

Everything in the room was saturated beyond repair including sales equipment belonging to the man occupying the room.

"He had quite a big day in the bar as he could not work until more sales material arrived.

"I'd say he'll dine out on 'the day the roof caved in on me in Greymouth' for years," Mr Leopold quipped.

Large suction cleaners were used to mop up the hallway and room, but not before some of the water had seeped into downstairs rooms, including a hairdresser's.

The bed the salesman was sleeping in minutes before the roof caved in is shown with ceiling material draped across it where his head would have been, in the accompanying picture.

Quake Damage Substantial^o As Aftershocks Continue

Damage from yesterday's two strong earthquakes on the West Coast is expected to climb to hundreds of thousands of dollars.

Aftershocks continue to shake the Buller region, with 20 recorded since yesterday's two big jolts, and residents and the Buller District Council are still assessing the damage caused.

The 200 or so claims already lodged with the Earthquake and War Damage Commission total round \$60,000 and, with a month in which to make claims, the cost is expected to escalate.

District Council manager, Mr. Barry Griffin, said repairing damage to roads and water supplies is likely to cost between \$50,000 and \$100,000. "We plan to seek some Government assistance," he said. "If we had declared a civil defence emergency, we would have got a Government subsidy automatically. But because the damage was incurred without this happening, all we have to fall back on is any insurance we may have." He said the council would be checking out its insurance policies before making a submission to Government for assistance.

ROAD'S SLUMPING

A number of roads in the area have suffered severe slumping. The Virgin Flat road, reduced by 68 metres as a result of the earthquake, has been closed. The Darkies Terrace, Charlton Beach, Nile Bay and Wilsons Lead roads have also been damaged, although they are still passable to traffic.

Mr. Griffin said the Dennison track had also suffered

substantial damage as had the road to the Westport water works.

The Cape Floulwind water supply tank has slumped, although the supply was still operational and there had been water pipe damage in the township of Waimangaroa which appears to have borne the brunt of the quake's force.

Damage to 296 chimneys in the district had been reported to the council and there had been reports of foundation subsidence and burst water cylinders at two homes in the Waimangaroa area and structural damage to a house in Reefton.

There were also numerous reports of broken crockery, burst water pipes and stock damage in shops.

BROKEN, CRACKED
All Hallenstein's plate glass windows were either broken or cracked in the first quake and will cost around \$400 to replace.

IMPORTANT
Ms Gerven said it was important that people who had suffered damage to property in the quake were aware that they had a month in which to lodge claims. Inquiries could be directed to the commissioner on its free-phone number 0800-652-333.

(Turn to Page 2)

The windows are currently boarded up and will be replaced with more quake-proof glass tomorrow.

Manager, Mr Wayne Gearing said it was lucky the quake had occurred when it did as the impact of plate glass smashing into the street during business hours would most likely have created panic and possibly caused injury.

Earthquake and War Damage claims administrator, Ms Joss Gerven, said today that the claims received to date had been for the repair of damaged chimneys. She estimated the cost of replacing a chimney could be as high as between \$500 and \$10,000.

Other claims had come from the Westport area and Waimangaroa although there had also been a few from Greymouth, Reefton, Murchison and Nelson.

Ms Gerven said it was important that people who had suffered damage to property in the quake were aware that they had a month in which to lodge claims. Inquiries could be directed to the commissioner on its free-phone number 0800-652-333.

Quake Power In Buller

Wpt. News 20/01/1961

Toppled chimneys, land slips and cracks in the road, plus considerable damage to retail stocks, were among the damage caused in the Buller area by Tuesday's two earthquakes.

These two Westport News photographs graphically illustrate the strength of the forces of nature — the quakes being the strongest felt since the massive Inangahua shake of May 1968.

Above, DSIR geologists from Wellington, Russ Van Dissen and Gordon Saul, examine damage to a section of the Virgin Flat Road.

They said the damage was not related to any particular faultline but was the result of sand movement beneath the road base after the shakes.

In the other photograph, Mr Bill Byrne, of Waimangaroa, examines damage to his home's chimney.

Mr Byrne's property suffered considerable damage. The hot water cylinder burst during the first jolt, which came at 2am, while the second, at 7am, brought down the chimney, overturned a TV set, threw kitchen goods to the ground, and upset a large cabinet.

Severe Aftershocks Likely In Buller

GES 3/1/91

Severe aftershocks up to magnitude five can still be expected in Buller over the next several weeks, according to the DSIR's deputy chief seismologist, Dr Martin Reyners.

He did not want to unduly alarm people, but said big earthquakes like Tuesday's 6 and 6.1 were normally followed by some severe aftershocks.

However, the good news is that the second earthquake will have released some of the strain and tremors might not reach as high as magnitude five.

Dr Reyners said the most forceful of the aftershocks, at 3.11 am yesterday, measured 4.2.

Two other large tremors later in the morning had a magnitude of between 3.7 and 4. Only quakes over magnitude 4 are measured precisely.

Dr Reyners said 20 tremors had been recorded since the second big earthquake at 7.01 on Tuesday morning up until noon yesterday. They had magnitudes of between 3 and 4.

Because of recent improvements in the National Seismograph Network, accurate

locations for the two main earthquakes were obtained soon after they occurred, said Dr Reyners.

He said they were located 15 km south-east of Westport, a few kilometres apart.

"We located these from Wellington with some readings from the stations on Denniston," said Dr Reyners.

DIFFERENT QUAKES

"We have a field team in the area and they are surrounding the aftershocks and sorting out exactly how one earthquake related to the other.

"It's highly likely one triggered the other to have them occurring so closely in time. We want to know how the two faults which moved in each of these two earthquakes."

Dr Reyners said the different effects of the two earthquakes experienced by many people were more the result of the type rather than the slight variation in magnitude or location.

"The type of motion produced in Wellington from the two shocks was different. With the first shock the ground moved up first and in the second the ground moved down first.

"We call that the mech-

anism of the earthquake and essentially it's telling us which way the fault moved — whether it moved horizontally one side past the other or a vertically one side moved up past the other.

"We know the two main shocks were a different mechanism and the mechanism often has quite a large bearing on the felt effects."

Dr Reyners said that would explain why shops lost goods from shelves on one side of their building in the first shock and from another side during the second.

BAD PERIOD

Staff at the Geology and Geophysics Centre at Kelburn, Wellington, said the two earthquakes were reminiscent of the bad period for strong earthquakes early last year.

On February 10 the first one of size six shook upper South Island and it was later found to have been centred 15km northwest of Hanmer Springs.

Another of the same size shocked southern Hawkes Bay east of Dannevirke nine days later.

26, and southern Hawkes Bay was hit again on May 13 with the strongest shock of the year, 6.7.

DSIR staff said earthquakes of magnitude four to 4.9 were common, averaging 150 a year, while there were 10 to 20 measuring five to 5.9.

On the West Coast the largest recent earthquake occurred on May 24th, 1968, and was centred at Inangahua. Three people died as a result of the quake which measured seven and was felt by most of New Zealand.

There has not been a seven or larger magnitude land-based earthquake in New Zealand since then.

The most destructive earthquake in recent times was centred at Edgecumbe in the Eastern Bay of Plenty in 1967. Although measuring 6.3 on the Richter Scale, it had far more impact than the magnitude suggested because it was far shallower than the Inangahua or latest Buller quakes which were 12 km below the surface.

The Buller experienced a swarm of large earthquakes 1962, past.

DSIR keeps watch on Coast shocks

PA

Wellington No further earthquake aftershocks have been felt on the West Coast since yesterday, but DSIR monitoring teams will remain in the area, a Wellington seismologist, Mr Murray Lowry, said yesterday.

Three teams from the Department of Scientific and Industrial Research went to the Buller region on Wednesday to monitor the aftershocks, assess the damage and find the epicentres of the two earthquakes which struck the area early on Tuesday.

The seismologists, geologists and geophysicists are concentrating on the Westport and Inangahua areas where the two big earthquakes measuring about six on the Richter scale hit hardest.

Eleven portable instruments will remain there for about a week to measure aftershocks and help the scientists pinpoint the epicentre.

A DSIR spokesman said on Wednesday that he believed the quakes were centred close to Cape Foulwind which is 10km west of the mouth of the Buller River.

Aftershocks shook the region on Tuesday with 20 recorded. The last recorded at DSIR headquarters in Wellington was at 7.50am on Wednesday. It was expected aftershocks would continue for up to a week but Mr Lowry said yesterday none had been recorded.

"An aftershock would have to be about four before it would be picked up here," he added.

Mr Lowry was surprised people in the region were not picking up any further movement. A seismologist, Dr Helen

Anderson, who is in the region said yesterday she was not sure why there had not been any more aftershocks felt. "Earthquakes are quite unpredictable," she said.

It was expected that aftershock movement — at least up to magnitude four or perhaps five — would have continued for some time, Dr Anderson said on Radio New Zealand's "Morning Report".

"They were part of a natural sequence of earthquakes which followed the main shock."

Damage from Tuesday's earthquakes was expected to cost hundreds of thousands of dollars.

About 200 claims totalling \$60,000 were reported lodged with the Earthquake and War Damage Commission on Wednesday.

Repairing damage to roads and water supplies was estimated to cost between \$50,000 and \$100,000.

The earthquakes and war damage claims administrator, Ms Jess Gerven, said on Wednesday that half the claims received had been for damaged chimneys. She estimated the cost of replacement could be as high as \$5000 to \$10,000.

Other claims had come from Westport and Waimangaroa although there had also been a few from Greymouth, Reefton, Murchison and Nelson.

The Grey District Council operations manager, Mr Mel Sutherland, said the combination of heavy rain on Monday and the two earthquakes cost the council close to \$50,000 in roading repairs.

P.T.O. → pic.

CD head praises resilience of Hokitika flood victims

By PAT TAYLOR

Residents of houses inundated when the Hokitika River flooded earlier this week were described as "resilient" by the area civil defence controller, Mr Ray Breeze.

Mr Breeze has visited most of the 25 households to gauge the extent of the damage and to see how those were affected were standing up to their losses. All properties were insured, but several did not have any contents insurance.

"The people have accepted what has occurred and they are coping very well," he said.

Good use has been made of a hangar at the Hokitika airport for drying carpets and more space was being sought. Some of the residents were back in their homes, but the wet weather since was making drying very difficult and this meant that many of them would not get

back to normal for about two weeks.

Behind Hokitika, the milk production in the Kokatahi and Kowhitirangi areas has fallen about 5 per cent since the flood and was not expected to improve, the general manager of the Westland Co-operative Dairy Company, Mr John Roberts, said yesterday. Throughout the company's supply district production is down 8 per cent or 40,000 litres of milk a day.

He said that the Kokiri meat works had had to put on an extra day's killing to cope with the cull cows from the flood area as farmers reduced stock sizes because of pasture losses.

Coming on top of the production losses from the already poor weather in January, the flood had given farmers and the dairy company "quite a knock," he said. Almost no silage or hay had been collected.

In Buller, which is recovering from the effects of two strong earthquakes, residents have been told by the DSIR's deputy chief seismologist, Dr Martin Reyners, that aftershocks could be expected over the next several weeks.

Many Westport cats are reported to have packed their bags and left home as a result of the quakes. A Westport veterinarian, Ms Stephanie Herron, said that cats seemed more nervous than dogs about the quakes, and some had gone into hiding.

"They're probably going to be a bit scary for the next couple of days. They are hiding under houses and reluctant to come out," she said.

They should be left to regain their confidence.

Dogs, on the other hand, were often closer to their owners. If the owners could reassure them they usually calmed quickly.

WESTPORT QUAKES DESCRIBED AS UNIQUE

A DSIR field team has left Westport describing last week's big earthquakes and their aftermath as "unique".

Two seismologists have spent almost a week in Buller measuring aftershocks.

One of them, Dr Russell Robinson, said it was unusual to have two big earthquakes close together and also to have so few aftershocks.

"It sometimes occurs that you have two main shocks, but when you have two like that, it doesn't mean that the aftershocks are going to be less than usual," he said.

"We have sort of a unique case here in Westport in that we had the two double main shocks and fewer than normal aftershocks, which is sort of unique in our experience so far."

The two main shocks measuring 6 and 6.1 on the Richter scale, hit at 2am and 7am on Tuesday, January 29.

Dr Robinson said the aftershocks had decreased ever since and most were

now too small to be felt.

When the seismologists left on Tuesday, their portable seismographs were recording between five and 10 aftershocks a day.

"We have no reason to expect things to hot up again," he said.

The instruments confirmed that the quakes were centred about 15 kilometres south east of Westport, in the Paparoa ranges.

Dr Robinson said that particular fault line did not appear to have caused problems before.

"In a way, it's a bit of a surprise."

DSIR geologists were unable to find any breaks on the earth's surface, indicating the quakes may have been centred more deeply than the original estimate of 12 kilometres.

"That would also, perhaps, tie in with the relatively small number of aftershocks," Dr Robinson said.

Hopefully, detailed analysis of the aftershocks would shed some light on the mechanisms of the two

earthquakes.

He said there was absolutely no correlation between the Westport quakes and an earthquake in Pakistan at the weekend. Neither was there any substance to a local theory that certain weather patterns made earthquakes more likely.

"If you think about it, the earthquakes initiate at least five kilometres underneath the surface. They're really quite ignorant of what's going on in the weather. It doesn't affect them one way or the other."

New Zealand has had more than its fair share of reasonably large earthquakes in recent years. Dr Robinson said this indicated an active period, but scientists did not understand the reason for it.

The seismologists are hoping they will have sufficient funding to analyse the data from Westport. They have still not analysed data from earthquakes in Dannevirke last year because of lack of funding. They hope to receive funds from the

Earthquake and War Damage Commission.

Dr Robinson said thieves stole a large car battery from one of their portable seismographs in Buller. It was located in a remote area on the Four Mile Road near Charleston.

PHENOMENON

Buller people who thought they saw a flash of blue light accompanying the 2am earthquake may have witnessed a rare phenomenon.

There have been several reports of people seeing something like lightning at the same time as the quake.

A Westport man said he saw a flash of blue light to the north. At first, he thought the approaching earthquake was a thunderstorm.

A DSIR seismologist in Wellington, Dr Helen Anderson, said it was difficult to know whether what people saw was just the power going off or a rare phenomenon called "earthquake lights".

"This could have been earthquake lights," she

said. "At the moment we don't have any good substantial evidence to say what earthquake lights are and we don't really know what causes them, but we're delighted to get any evidence from people in the area to tell us about what they have seen in terms of earthquake lights."

These have previously been described as lights in the sky before and after earthquakes.

In 1976, they were reported before and after an earthquake in Italy which measured about six on the Richter scale.

"The thing you would think of is that it's some kind of magnetic phenomenon like the aurora," said Dr Anderson. "But certainly, it has not been well documented."

She said the DSIR would welcome any information from the public. People could contact the Seismological Observatory (ph Wellington 738211) and would be sent a form to fill in.

1/2/91
The WPT News
The Government has responded promptly to the Buller District Council's plea for funds to check chimneys throughout the district for earthquake damage.

Mayor, Pat O'Dea, said the Prime Minister had made an interim allocation of funds. Mr O'Dea said this would enable his council to take on unemployed people immediately to begin smoke testing chimneys.

Council hopes to employ 18 people.

Mr O'Dea said priority would be given to fireplaces required for water heating and cooking.

He expects cabinet to consider a total West Coast relief package, for the earthquakes and the Westland floods, this week.

He is confident Buller's application for funds will be approved.

X FRIDAY'S SHAKE END

The Westport News 18/2/91

OF BIG EARTHQUAKES?

A DSIR seismologist says Friday night's magnitude 5.8 earthquake on the West Coast is probably closely related to two magnitude six quakes last month.

Dr Russell Robinson said the three strong quakes probably constitute an "earthquake swarm". In which there is no clear main shock.

"I would be surprised if there are any more earth-

quakes as large as these three big ones," he said. "Judging from past experience of a swarm near Westport in the 1960s, the

duration of these things is typically about two weeks.

However, he would not

make any predictions.

"Earthquakes are funny

things," he said. Dr Robinson admitted he was surprised by Friday's quake coming 17 days after the other two.

"To be quite honest, I thought after two weeks the chances were pretty small of anything big."

It was centred in the same area as the others (15 kilometres south east of Westport) and it was hard to tell why Reefton was hardest hit this time.

Sometimes, damage depended on the exact mechanism of an earthquake which could push harder in one direction than another, Dr Robinson said.

In Reefton, it toppled a number of chimneys, smashed the window of the Cameo Gift Shop, shook an interior ranchslider door off its track and burst the water mains at the local Bank of New Zealand.

Fire Chief Stuart Robinson said a concrete block wall at the fire station was cracked and a pipe sheared off the filtration unit at the town's swimming pool. He said the pool would be out-of-action unless repairs could be made soon.

Reefton residents said the shaking was stronger and damage more severe than last month's quakes.

To us, it was far worse than the other two," said Cameo Gift Shop proprietor, Lyn Sutton. However, she said stock damage was mostly confined to goods in the shop window, damaged by falling glass.

The assistant manager of the Hotel Reefton, Brendon Bailey, said both his home and his parents'

hotels were damaged. Achimney fell down into his lounge, a television-set toppled off its stand and glassware was broken.

The hotel chimney also toppled and several hundred dollars worth of liquor was lost.

Mr Bailey said the quake was definitely worse than those last month.

"It was terrible. It came straight on - bang and it was there."

Reefton Motors proprietor, Bruce Watts, said he did not think the quake was worse and was surprised to see how much stock had toppled off shelves.

"We've got a coffee machine upstairs and it burst. We had water coming down the windows." He said.

The proprietor of Dawson's Hotel, Elizabeth Rock, said the concrete block building stood up well.

"There was no major damage. Just things off shelves broken. But ours is mostly confined to goods

in the shop window, damaged by falling glass.

The assistant manager of the Hotel Reefton, Brendon Bailey, said both his home and his parents'

when the hotel lost no stock at all. Achimney fell down into his lounge, a television-set toppled off its stand and glassware was broken.

"A couple from England had never been in an earthquake before and they were still quite shaken in the morning. But they said they came to New Zealand to have a taste of New Zealand life and they feel that having an earthquake was part of that," she said.

"I think they went away feeling they had had an experience they wouldn't experience anywhere else."

The Seismological Observatory in Wellington initially said the earthquake measured 6.3 and was centred well out to sea. However, seismologist, Murray Lowry, later revised his provisional assessment.

The country townships north of Westport, which were hard hit by the second big earthquake last month, also escaped lightly.

Gravity fire chief, Murray Watson, said there had been no reports of damage. However, he said the mid-night earthquake seemed almost as bad as last month's second shake and was "very noisy".

Mr Watson said the quake may have damaged chimney it had inspected since the first quakes.

again had broken glass, split pickles and jam to clean up, but they said overall damage was minor compared to last month.

Works Consultancy Services said state highways were virtually unscathed. Operations manager, Noel Eade, said some rocks came down in the lower Buller Gorge, but were quickly cleared up by a front-end loader.

He said it was possible last month's bigger quakes had already brought down the most unstable material.

Works inspected the roads in the early hours of Saturday morning. They found no new cracks or bridge damage.

The country townships north of Westport, which were hard hit by the second big earthquake last month,

also escaped lightly. Mr O'Dea described the quakes as "horribly frightening" but said most people had come to grips with them.

He said the Buller District Council would probably have to re-check every previously undamaged chimney it had inspected

MAYOR

Buller's mayor, Pat O'Dea, thought the quake was similar to the one that 17 days earlier. He

said it was less frightening because power stayed on.

Mr O'Dea did a circuit of town and was pleased to see so many neighbours

checking on each other.

He said most West Coasters were taking the earth-

quakes in their stride.

"I think people are pretty resilient on the Coast. I have no doubt they'll take this and anything else that's thrown at us."

"I guess when you look back at the last 30 years we've had four or five major earthquakes. There's been three deaths that I know of - more people have been killed walking across the roads."

Mr O'Dea described the quakes as "horribly frightening" but said most people had come to grips with them.

He said the Buller District Council would proba-

EARTHQUAKE LIGHTS

Earthquake

INVESTIGATION HERE

claims to be reassessed

The Seismological Observatory in Wellington is investigating several reports of a rare phenomenon called "earthquake lights" accompanying last month's magnitude six earthquake in Buller.

Seismologist, Murray Lowry, said earthquake lights were sometimes seen in big quakes of magnitude seven or more. He said there was a theory that they happened when rock strain generated electricity, causing a flashover.

Mr Lowry said more than six people in Westport had reported seeing a flash during the first big earthquake three weeks ago.

"Most of them saw a pretty direction-provoked a lot of reports of earthquake less flash in the sky," he said. "One person mentioned there was some low cloud and what he saw could have been a reflection. But it must have been pretty bright. Some people thought it was too bright to possibly be lightning."

Mr Lowry said most people saw the flash during the earthquake. "Most of them seemed to feel it

couldn't have been power lines, although there were some power lines broken."

He said the Buller Electric Power Board doubted whether the power cut would cause such a bright flash.

Mr Lowry said the general phenomenon of earthquake lights was poorly understood.

"There is quite a lot of interest in these things and quite a lot written about them. But it's one of these things that are terribly hard to nail down. Also, the variety of lights reported is quite big. They're not always the same."

He said the Westport earthquake had provoked a lot of reports of earthquake lights for a relatively small quake. "Usually, the freakish things in earthquakes tend to start happening about magnitude seven, rather than magnitude six," he added.

While he continued to investigate the Westport reports, he may never establish exactly what people had seen.

All claims for damage caused by the recent earthquake will be reviewed before a final assessment of damage and the amount of excess payable is decided.

Earthquake Commission spokesperson Joss Geiven told the "News" today that people should not be too concerned if it appeared that similar situations were being treated differently.

A Gravity woman had approached the "News" seeking clarification on the difference between land claims and building claims and why apparently similar situations are treated differently.

People in doubt as to whether damage had been incurred should lodge a claim within the month limit. Claims could be contested, however, up to three months where damage had occurred but was not recognised or if people had been away from the country or for other valid reasons.

ment for house damage is \$200, and for land \$500. Ms. Geiven said that determining the difference was by no means simple, but she could assure claimants that a further review would be carried out before a final decision was made.

She reminded people with claims or possible claims for earthquake damage to lodge them with the commission within a month. This could be done by ringing the toll-free number 0800-652-333.

People in doubt as to whether damage had been incurred should lodge a claim within the month limit. Claims could be contested, however, up to three months where damage had occurred but was not recognised or if people had been away from the country or for other valid reasons.

Earthquake Commission managers in Westport

Westport News Fri 22 Feb '91

Earthquake and War Damage Commission general manager Milton Allwood and claims manager Joss Gerven have been in Westport today visiting insurance assessors, claimants and district council staff.

Over 1166 claims totalling around \$1.5 million have been lodged with the Commission following the three big earthquakes that rocked the region in January and this month.

The majority of claims, about 650, are from the Westport area and Waimangaroa with almost 200 from Greymouth, 126 from Reefton, 13 from Hokitika and the remainder from outlying areas.

Other claims have come from as far afield as New Plymouth and Christchurch after the January quakes.

One was from a New Plymouth massage parlour owner who claimed the January quake had broken windows on the premises.

Despite being advised by the DSIR that the quake could not have caused damage in New Plymouth, the commission sent an assessor to investigate the claim. The cost of the damage was, however, less than the \$200 excess, Mr Allwood said.

He said he believed all the West Coast claims were bona fide. Damage to chimneys accounted for 838. Eighty-six related to internal wall and ceiling

damage, \$1 for damaged hot water cylinders, 86 for broken ornaments and crockery and 14 for retail stock. Claims averaged around \$1500.

Only around 50 claims, mainly from Reefton, were for damage caused by this month's deeper quakes.

The commission has begun to pay out on claims and expects to have them all settled within the next two or three months. People who incurred property damage in the January quakes have until next Wednesday to lodge claims and until March 17 to forward claims for this month's quake.

The commission pays out only on the indemnity value of the damaged property - replacement less depreciation.

This explains why many Buller residents have questioned payouts they have received or been told they can expect to receive.

One pensioner had \$2,000 of damage done to property, but will only get \$800 from the commission. Another commercial building which lost two chimneys can only expect \$4,000 of the \$11,000 it will cost to replace them.

Mr Allwood said they only paid out on the value of property at the time of damage. If a chimney was 50 or 60 years old they could not be expected to pay the full replacement

cost.

He said every single claim was different and claimants could not compare their refunds with other people's.

Often damage done to one property was classified under different regulations to damage on neighbouring land. That meant different excess payments and subsequent payouts were necessary.

Those without insurance cover on their property do not qualify for Earthquake and War Damage insurance.

Mr Allwood said figures released by the Insurance Council following the January earthquakes indicated that 20 per cent of West Coast property owners were uninsured.

"Compared with the rest of New Zealand that is very high."

Often in major disasters the Government and local bodies set up relief funds but Mr Allwood said he believed these were inequitable.

"People who get grants out of relief funds can end up better than those who have been paying insurance."

He said the Government was exploring ways of

making disaster insurance compulsory for every home owner to reduce the cost of subsidising disaster damage. "It's costing too much. On top of that they have to pay for damaged roads and bridges."

Although the recent quakes were of the same magnitude as those which shook southern Hawkes Bay in February and May last year, damage was nowhere near as severe.

Damage in Hawkes Bay totalled around \$10 million with almost 5500 claims lodged with the Commission.

Mr Allwood said those quakes were shallower than the ones felt on the West Coast and because the ground there is more alluvial, there was considerable damage to buildings.

Although damage is unavoidable in earthquakes of this magnitude, people could take precautions such as strapping hot water cylinders to the structure of the house, and securing piles, he said.

The recent quakes highlighted the large number of brick chimneys on the West Coast and Mr Allwood said it might be preferable to replace these with metal flues and free-standing fireplaces which would stand up better to earthquakes.

Earthquakes still baffling experts

WPT News 22/1/1991

The pattern of the recent West Coast earthquakes continues to surprise the experts.

The Seismological Observatory in Wellington said there had been fewer after-shocks than expected since last Friday's magnitude 5.8 quake. It was centred about 15 kilometres south east of Westport.

The Observatory's super-sensitive instruments in Wellington have recorded about 10 after-shocks since last Friday. The instruments will only pick up 'quakes of magni-

tude 3.5 or more.

Seismologist, Dr Russell Robinson, said the small number of after-shocks was unusual, but this was not an ominous sign.

However, he admitted he had said the same thing after last month's magnitude 6 earthquake and was surprised by the third strong shake.

"You really can't say," he added. "We'll add this to our store of experience and next time we go somewhere and see the same pattern we'll be able to make a better guess."

He said the pattern of the

West Coast earthquakes had been unique, although they fitted into what seismologists called an "earthquake swarm" in which there was no main shock.

It will be about six weeks before seismologists begin analysing the data gathered from the earthquakes.

Meanwhile, claims for damage continue to pour into the Earthquake and War Damage Commission. It has had another 300 claims since last Friday's quake, bringing the total value of claims to more

than \$1.5m.

Spokesperson, Demetra Kennedy, said the latest claims came from the Westport and Reefton areas and were mainly for chimney damage.

She said there had now been more than 1200 claims since the first earthquake.

The Commission has about 20 assessors working on the West Coast.

Quake 4.9

NZPA News 26/1/91

The DSIR says an earthquake which shook the West Coast at 1.50pm on Sunday measured 4.9 on the Richter scale.

The quake was felt most strongly in Westport and Reefton as a shaking movement lasting less than 10 seconds.

It was followed a few minutes later by a small tremor.

There were no reports of damage.

Seismologist, Murray Lowry, said the shock was considered part of a series which began at the end of January.

It was "considerably weaker than the largest shock of the series on January 29, which attained a magnitude of about 6.1," he said.

The Seismological Observatory had no reading for the second, smaller tremor.

The earthquakes are termed a "swarm" by seismologists. There have now been three large quakes, measuring 6, 6.1 and 5.9 on the West Coast in the past month.

All of them were centred near Westport.

Meanwhile, a Buller High School guidance counsellor said students seemed to be coping with the stress of the earthquakes.

Ross Wiechern said he knew many students remained anxious and he had expected some would ask for counselling. However, there had been none so far.

Mr Wiechern assumes families are helping the youngsters cope with the stress, but said he was concerned some students may not be dealing with it.

He believes school staff have helped students feel more secure by talking to them and teaching them earthquake drill.

GNS Quake Search Database printout

for one month from

Jan 29th to Feb 28th 1991

Note that database dates are 12 hours ahead of NZ Time, i.e. first earthquake is shown as having happened at 12.58 pm 28/1/1991. A further one hour discrepancy between the database and media reports is presumed to be due to the latter being given as per 'daylight savings.'
